

# Nalaiya Thiran (IBM)

## ASSIGNMENT – 3

1. Write a python program to blink an LED in Raspberry Pi.

```
import RPi.GPIO as GPIO # Import Raspberry Pi GPIO
library
from time import sleep # Import the sleep function from
the time module
GPIO.setwarnings(False) # Ignore warning for now
GPIO.setmode(GPIO.BOARD) # Use physical pin numbering
GPIO.setup(8, GPIO.OUT, initial=GPIO.LOW) # Set pin 8
to be an output pin and set initial value to low (off)
while True: # Run forever
    GPIO.output(8, GPIO.HIGH) # Turn on
    sleep(1) # Sleep for 1 second
    GPIO.output(8, GPIO.LOW) # Turn off
    sleep(1) # Sleep for 1 second
```

2. Write a python code for blinking Traffic lights for Raspberry Pi

```
from gpiozero import Button, TrafficLights from time
import sleep
button = Button(21) lights = TrafficLights(25, 8, 7)
while True:
    button.wait_for_press()
    light.green.on() sleep(1)
    lights.amber.on() sleep(1)
    lights.red.on()
    sleep(1) lights.off()
```
